

PAS Inpatient - inpatient transfer

This function allows you to transfer patients to another ward **within** the same hospital. It cannot be used to transfer to other hospitals. You can also transfer a patient using the **Inpatient Stay Movements (H I S M)** option from your menu.

From the Inpatient Basic menu select **Inpatient Transfer (H I T R)**, search for and select the patient. Their current status will be displayed as shown below.

HITR		INPATIENT TRANSFER	
Current name: LEADER, PATRICIA		DOB: 24-JUL-1961 Sex: F	
Treatment Number: C001739		C.R. Number	
Ward	RCH TR DERMATOLOGY WARD		
Specialty	DERMATOLOGY		
Consultant	DR LUCKE		
Transfer date	[22-OCT-2007]	Transfer time	[]
Ward	[]		
Specialty	[]		
Consultant	[]		
Accept/Change/eXit []			

Above the transfer date are the details of the ward, specialty and consultant the patient is currently admitted under.

Transfer date, - This will default to today's date. Change the date of transfer if back dating the entry.

Transfer time, - This will default to current time. Change the time of transfer if back dating the entry

Ward, - Enter the ward code the patient is being transferred to. Press the **F1** key for Help.

Speciality, - Enter the specialty code. Press the **F1** key for Help.

Consultant, - Enter the consultant code. Press the **F1** key for Help.

Type **Ay** and press the return key to Accept the details.

If the Specialty or Consultant has changed you will be prompted to confirm that the Treatment number is correct before **A** to Accept.

Ensure the Treatment number is the CR number. This **must** not be changed to any other number.

Create tracer?, - Enter **Y** for Yes as you will need to tracer the notes to the new location.

Type **X** and press the return key, or press the **F3** key to exit.

IMPORTANT

If the patient has been admitted for a planned procedure but also has a TCI for the same day you **must** discharge the patient from the ward where they had their procedure using Usual Place of Residence as the destination.

This will then allow the other ward to confirm the admission thus linking the RTT code to the appropriate admission and ensuring that the Waiting List event is complete. **DO NOT USE THE TRANSFER OPTION.**

If however, the patient is currently an inpatient and has a planned procedure for example dialysis or endoscopy, during their stay this will be classed as a **Transfer** and must be transferred on PAS to and from the appropriate ward.
