

Computerised Radiology Information System (CRIS)

CRIS is an advanced Radiology System used for administration within Clinical Imaging. It is used to manage all Clinical Imaging events, making/changing/cancelling appointments, printing appointment letters, recording radiation doses and clinical reports. CRIS is shared with Plymouth University, Royal Devon & Exeter, North Devon and South Devon allowing us to see Radiology events that have taken place within the South West Consortium.

To request an account for CRIS please complete the attached form [CRIS - Account Request Form \(sma247.com\)](#) and contact the PACS Team for training.
